**How can I avoid starting insulin? - NEW**
Millions of people in the United States are “pre-diabetic” or have been recently diagnosed with type 2 diabetes. The usual progression for these conditions is to start on oral medications to treat high blood sugar, but eventually end up taking insulin injections several times per day. The good news is that many, if not most of these people do not need to follow this typical decline if they learn to recognize the factors that cause escalating blood sugars and take the necessary steps to prevent it.

**Let’s Get Moving!**
Discover fun and easy ways to incorporate physical activity into your everyday life without having to go to the gym. Be prepared to get moving and wear appropriate clothing and shoes.
