

## **Mobile Application Roll-Out**

On Monday, February 26, we will begin rolling out the suite of mobile applications for Cerner. We are the first in the Banner Network to have a widespread deployment of this technology. The applications are:

**PowerChart Touch:** Review history, notes, results, and place orders  
**Camera Capture:** take clinical images and upload to the chart  
**InstaNote:** Create notes with Dragon Medical One voice recognition  
**Message Center:** Shows your Message Center from Cerner

Users must download these applications from the PLAY store or APP store. We will be using a rolling implementation and we anticipate 2-300 activations per day. The initial roll-out will be to the BUMCT Hospitalist group, Trauma Surgery attendings and APPs, and about two-thirds of the resident group that are heavy users of image capture from our Epic experience. This group we will send activations codes as we expect them to be heavy users of the applications.

Following the first wave, we will send offer emails to residents and attendings by Academic Department starting with high utilizers and finishing with light users. Users who wish to install these applications will use the “YES” voting button to be sent a activation code.

### **IMPORTANT**

The activation code will be active for 7 days from receipt. Please install right away. If you miss the window, you will need to enter a Service Hub request for a new activation code that will be distributed after the main group has been solicited.

### **IMPORTANT**

We are asking users NOT to place orders or generate notes on PowerChart Mobile until we are certain of the functionality in a large-scale deployment. We will send out the all clear to services when orders and notes can be placed through the mobile apps.

There are some limitations encountered in testing that we want you to know about:

1. Care Team and certain other patient lists do not function at this time.
2. Care sets and PowerPlans can't be used on the mobile device. While the mobile app is pretty powerful, it is not designed to replace the desktop.
3. Images are place on the Clinical Media tab, but cannot be pasted into notes.

We hope you have a very positive experience with these applications. Please use the [Banner Health IT Service Desk](#)—(520) 694-4357—for problems activating or other issues. Feel free to call [Kevin Reilly, MD](#), (520) 626-7039 or [kreilly@aemrc.arizona.edu](mailto:kreilly@aemrc.arizona.edu), and [Lisa Chan, MD](#), (520) 626-3350 or [lisac@aemrc.arizona.edu](mailto:lisac@aemrc.arizona.edu), if you have any issues that require immediate attention.
