

Desert Lung Disease

CONFERENCE

April 15-16, 2016

JW Marriott Starr Pass Resort & Spa
TUCSON, AZ

The University of Arizona College of Medicine and Banner – University Medical Center are pleased to announce the first inaugural meeting of **Desert Lung Disease Conference**. The conference will be dedicated to the topics related to the latest advancement in Lung Cancer and End-Stage Lung Disease. Pulmonary diseases are among the most commonly seen in many practices. While many problems are effectively controlled with simple regimens in the outpatient setting, some progress to end-stage lung disease in which lung transplant is a final therapeutic option. Care for these patients involves knowledge of chronic disease management and can be challenging. Lung Cancer is the deadliest of cancers but new screening techniques hold promise for those patients at highest risk. Knowing the appropriate evaluation, oncological and surgical treatment is paramount.

Treatments are rapidly changing in certain diseases such as pulmonary fibrosis and pulmonary hypertension. Up to date knowledge of both medical and surgical options is important for the best patient care. **This maximum 12 credit educational activity** is directed toward primary care physicians, advanced practice practitioners (PAs, NPs), nurses, pulmonologists, oncologists, and other healthcare professionals interested in the management and treatment of lung diseases.
