

SPARK LECTURE

The role of race, ethnicity, and alternatives in understanding and improving lung function.

Race was embedded in the interpretation of pulmonary function tests due to social rather than biological reasons. In this session, we will review this history and the concerns, risks, and limitations of including racial categories in pulmonary function test interpretation. The audience will also leave with a review of the evidence behind the ATS guidelines recommending removal of race from pulmonary function test interpretation, the clinical implications of this recommendation, and the many remaining gaps in our understanding of how to use pulmonary function tests to improve health.

This event is hosted as part of the Medicine Grand Rounds lecture series by the <u>Department of Medicine</u> at the University of Arizona College of Medicine – Tucson and Banner – University Medicine Tucson.

Wednesday, June 21st, 2023, 12 – 1 p.m.

Presenter: Nirav Bhakta, MD

University of California, San Francisco

Associate Professor
Site Director and Coach, Pulmonary Fellowship
Associate Director,
Adult Pulmonary Function Laboratory
Investigator, Airway Clinical Research Center
