Nov. 15, 2016

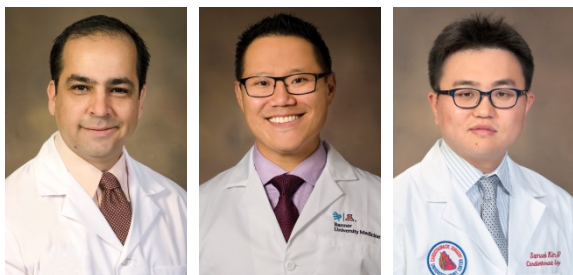

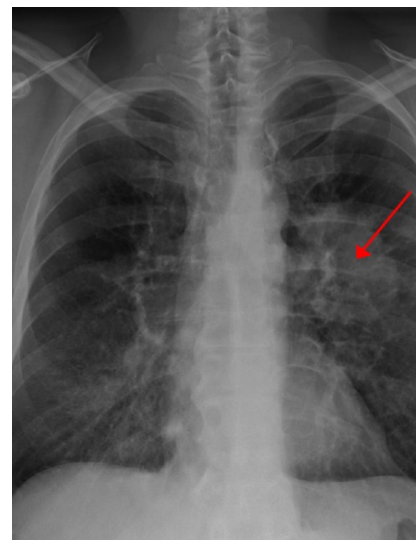

5:00-5:30 p.m. - entertainment/refreshments

5.30-7.00 p.m. - presentations

University of Arizona Cancer Center – North

3838 N. Campbell Ave., Tucson, AZ 85719

More people in the United States die from lung cancer—which accounts for 27 percent of all cancer deaths—than any other type of cancer. This is true for both men and women, according to the U.S. Centers for Disease Control and Prevention. Still, reported the American Lung Association, the number of deaths caused by lung cancer peaked at 159,292 in 2005 and has since decreased by 2.3 percent to 155,610 in 2014. With the new CMS certification for the reactivated Lung Transplant Program at Banner – UMC Tucson, local patients have more choices—in addition to multiple treatment options—than ever.

Presenters include:

■ **Afshin Sam, MD**, an assistant professor of medicine, Pulmonary Division, & member, UA Cancer Center Southwest Lung Cancer Program. ■ **Charles C. Hsu, MD, PhD**, a UA associate professor of radiation oncology & member, UA Cancer Center Radiation Oncology Team. ■ **Samuel Kim, MD**, interim chief, Section of Thoracic Surgery, & assistant professor, UA Department of Surgery.

*Light refreshments & soft entertainment—from harpist **Mary Bouley** (right)—will be provided.*
